

Welcome to New York City NightSeeing

Presented by

NEW YORK CITY SECTION

Illuminating
ENGINEERING SOCIETY

in association with the

Designers Lighting Forum of New York

New York has long been known as the City That Never Sleeps. Whether you're up working late or out enjoying a night on the town, our City is just as alive at midnight as it is at midday. And anyone who's had the pleasure of seeing New York's skyline at night will understand immediately why it's one of the world's most iconic images.

Our City's nightscape has served as the backdrop to countless Hollywood films, and few places in the world are more electrifying and inspiring than Times Square in all its illuminated splendor. But rarely do we take the time to appreciate the key players in this spectacular show, whose role allows us to fully enjoy New York's nighttime charm: our City's lights. Indeed, from the Statue of Liberty to the George Washington Bridge, from Coney Island to the Brooklyn Central Library, many of New York's most iconic landmarks achieve their greatest beauty by night, thanks to the hard work of some of the world's leading lighting designers and engineers.

This map is a unique and useful guide to exploring the nightscape of New York City, and offers a tour of some of the most spectacular lighting designs around the five boroughs. I invite you all to take a walk and enjoy the sight of the world's greatest city by night.

Michael R. Bloomberg

Mayor, The City of New York
